Office Action Summary

Application/Control Number: 09/072,963

Art Unit: 3768

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 26-30, 33-36, 38, 40-49, and 51 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 26-30, 33-36, 38, 40-49, and 51 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Denk et al* (5,034,613) in view of *Kolobanov et al* (4,973,848). Note that the Examiner interpreted the means plus function language under the 112 6th paragraph.

Claims 26-30, 33-36, 38, 40-49, and 51: Denk teaches an imaging apparatus or a microscope for imaging a particular volume of plant or animal tissue containing at least one photo-active molecular agent, the apparatus comprising:

a source of collimated light, said light having a frequency effective to penetrate into the tissue, said light being adapted to promote simultaneous two-photon excitation (TPE) of the molecular agent contained within the tissue (see col. 2, lines 33-65; describing the source of collimated light capable of TPE);

Application/Control Number: 09/072,963

Art Unit: 3768

focusing apparatus for focusing the collimated light throughout a range of focal lengths extending from a surface of said tissue to a depth substantially beyond said surface said light source and focusing agent, apparatus cooperating to promote TPE of the molecular agent, wherein a focal point or focal plane is adjustable with respect to said tissue (see col. 4, lines 32-60; describing focusing through an objective lens and adjustability of the focus); and

a detector located proximate to the tissue and positioned to detect said light emitted by the molecular agent and which travels a path that does not retrace an optical path of the light incident on the tissue, said detector configured to produce a detected signal characteristic of the particular volume at which the light source has been focused (see col. 2, lines 59-65).

The pulse duration used is about 75MHz and sub-second pulse duration (see col. 6, lines 35-38). While the energy of the pulse is not explicitly stated, given the duration characteristics it would be inherent that they would produce the same energy or 20 nanojoules. The light source produces near-infrared light (see col. 6, line 51) and wherein the light source comprises a laser (see col. 6, lines 54-59). It is noted that TPE allows imaging living tissue within a certain of depth of tissue. TPE is a variation of the multiphoton fluorescence microscope and uses pulsed long wavelength laser to excite fluorophores within the tissue, thereby permitting in vivo imaging through the imaging apparatus described by Denk et al. Further, pulses of long wavelength retain a moderate average illumination intensity of long wavelength light throughout the remainder of the specimen outside the region of the focal point (col. 3, lines 17-22).

Application/Control Number: 09/072,963

Art Unit: 3768

Denk et al. also disclose a suitable detector such as a photomultiplier tube 54, but do not specifically disclose a processor coupled to a detector or a modulator associated with the light source. In the same field of endeavor, Kolobanov et al. teach of a modulator 10 associated with treatment laser 12 that is under full control and coupled to another control device such as a computer (col. 13, lines 35-68). It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate the teaching of Kolobanov et al. in order to facilitate the analysis of signals detected by the detector.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Rozanski whose telephone number is 571-272-1648. The examiner can normally be reached on Monday - Friday, 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eleni Mantis-Mercader can be reached on 571-272-4740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
